

HEINEKEN Data science and analytics summer internship

The Gyle, Edinburgh

Do you want to be part of one of the most progressive companies in the UK? A company that puts 'enjoyment of life' at its heart? A company that pushes boundaries, yet steeped in over 100 years of history? Then read on to how you can take your first steps in your career with us.

Our portfolio includes some of the nation's most loved ciders and beers – including Heineken®, Foster's, Strongbow, Old Mout, Desperados, Red Stripe and Bulmers. And that's just a handful of the huge range of brands. With our own pubs Business, Star Pubs & Bars, we are the UK's leading, pub, cider and beer business.

With over 2,000 colleagues employed across the UK, we offer fantastic opportunities for people with talent and drive. We've ambitious goals, and we know it's the expertise and enthusiasm of our people that fuels our growth.

As part of a revolution in our digital approach we aim to explore the tools, techniques and capabilities of data science and advanced analytics to exploit the data we hold, drawing actionable insight to help drive decision-making and business value.

We have 2 x internship opportunities over the summer to run a number of proofs of concept across our business – ranging from finance, supply chain, contact centre to marketing and sales. We have no shortage of data – structured, unstructured, siloed, shared, and this is where you can play your part. Can we gain novel insight from it? Determine patterns and trends? Complement our traditionally historic, but critical, reporting with moves to predictive models? Use visualisation to explore our data in new ways and tell stories about the insights gained? Can we build models supporting value-add analysis across our business?

Part of the work will be to create a buzz around data and lay the groundwork for a greater understanding of analytics, the capabilities we need to support our ambitions and finish the summer with real answers to real problems and papers describing our successes, failures and lessons learned that we can share across our international business.

To enable you to hit the ground offering you will bring an intense curiosity and insatiable desire to explore and exploit data. You will be able to demonstrate skill in data science techniques, tools and processes. You're likely studying for an MSc or PhD or are an undergraduate with demonstrably strong, practical skills. Data visualisation experience an advantage.

What we offer in return is a 3 month paid internship, offering you real, hands-on commercial experience with one of the country's leading FMCG companies. You'll address real world problems – driving real world results. Even moreso, you'll have the opportunity to build strong stakeholder management skills and forge a strong network for future career opportunities. Our office is located at the Gyle, Edinburgh.

This is a great opportunity to join one of the most exciting businesses in FMCG today, and at a crucial time in our development – as we push ahead with a full new product development programme, activate key sponsorships over the summer and deliver a number of corporate business and sustainability promises.

So what are you waiting for? Apply now! Assessment to take place w/c 11th June. Start date mid-end June. [Click here for the job posting and application.](#)
